RUSLAN JABBAROV

Model Validation & Credit Risk Analyst (Intern)

Baku, Azerbaijan | +994 51 476 70 25 | ruslaanc0000@gmail.com | GitHub | LinkedIn

PROFILE

Business Administration student at UNEC with a Data Science background. I have built a credit risk scoring system in Python and SQL, from raw data to a live web app, following Basel III and IFRS 9 ideas. I also work with transformer-based NLP and I like checking how a model behaves: what drives its predictions, how well it separates good and bad cases, and where it fails. I am looking for a model validation internship where I can work on real validation tasks and learn from experienced validators.

EDUCATION

Azerbaijan State University of Economics (UNEC), Baku *Sep 2023 – Present*

Bachelor of Business Administration, GPA 85/100

Div Academy, Baku *Oct 2025 – May 2026*

Data Science program

PROJECTS

Credit Risk Assessment System *Python, LightGBM, SHAP, SQL, FastAPI, Docker*

- Built a credit scoring model on 307,511 loan applications. It reached an AUC-ROC of 0.78 and a Gini of 0.56.
- Cleaned and checked the data, then created 72 features out of 406 raw inputs.
- Added a 3-tier decision rule and SHAP explanations so each decision can be explained, in line with Basel III expectations.
- Deployed it as a live app (FastAPI, Streamlit, Supabase PostgreSQL, Docker, Render). github.com/ruslancabbarov/Home-Credit-Risk-Management

Multilingual Text Classification, DataRace / MSİM competition *Python, TF-IDF, XLM-RoBERTa*

- Built an ensemble of TF-IDF and XLM-RoBERTa for texts in Azerbaijani, Russian and English. Public leaderboard score: about 0.9166.
- Worked hands-on with transformer language models, the same family of models behind today's LLMs.

Fraud Detection *Python, XGBoost, FastAPI*

- XGBoost model with AUC 0.998. Feature engineering raised fraud recall to 96%. Served as a REST API for real-time scoring.

Employee Churn Prediction | California House Prices *Python, Scikit-learn*

- Churn: Random Forest with 98% accuracy; tuned the threshold so at-risk recall went up to 97%.
- House prices: Lasso regression with feature selection to reduce overfitting; median income came out as the main driver.

EXPERIENCE

Local Head of Global Internships, AIESEC in Azerbaijan *Feb 2026 – May 2026*

- Led a team of 5 and tracked KPIs to grow the internship pipeline and conversions.
- Looked at supply and demand to match international offers with local applicants.
- Found bottlenecks in the application-to-realization funnel and fixed them with data-backed changes.

Finance Operations Analyst, AIESEC in Poland (Remote) *Sep 2025 – Feb 2026*

- Went through spending across several Local Committees, flagged unusual items and suggested savings.
- Built SQL and Python reporting workflows that cut manual data entry and made the numbers easier to follow.
- Checked and consolidated monthly financial reports for accuracy, data security and policy compliance.

SKILLS

Model risk & validation: credit risk (PD/LGD/EAD), IFRS 9, Basel III; validation tests (discrimination, calibration, stability, backtesting); data preparation and quality checks; validation reports and working papers; SHAP explainability

Programming & statistics: Python (Pandas, NumPy, Scikit-learn, LightGBM, XGBoost), SQL (PostgreSQL), statistics, Excel, Git

Machine learning: regression, classification, clustering, feature engineering, model evaluation

Gen AI & LLMs: prompt writing, RAG, AI agents; testing AI models for accuracy, hallucination, bias and robustness; automating validation work with AI tools; transformer NLP (XLM-RoBERTa)

Tools: FastAPI, Docker, Streamlit, Jupyter, Matplotlib, Seaborn, Plotly, Microsoft Office, Google Workspace

Working style: analytical, careful with details, learns fast, takes responsibility, team player, respects confidentiality and information security rules

LANGUAGES

Azerbaijani (native) | English (B2, can read and write technical documents) | Turkish (B2)
